## The Bright Side of Mathematics

Sequences: A sequence of real numbers: a map  $\alpha: \mathbb{N} \to \mathbb{R}$ or  $\alpha: \mathbb{N}_{0} \to \mathbb{R}$ Notations:  $(\alpha_{1}, \alpha_{2}, \alpha_{3}, ...)$  infinite list of numbers  $(\alpha_{h})_{n\in\mathbb{N}}$  or  $(\alpha_{h})_{n=1}^{\infty}$  or  $(\alpha_{h})$ Examples: (a)  $(\alpha_{n})_{n\in\mathbb{N}} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$   $\widehat{araph:} \quad \widehat{n} = (-1, 1, -1, 1, ...)$  $\widehat{araph:} \quad \widehat{araph:} \quad \widehat$ 

(c) 
$$(\alpha_n)_{n \in \mathbb{N}} = (2^n)_{h \in \mathbb{N}} = (2, 4, 8, 16, 32, 64, 128, 256, ...)$$

Definition: A sequence  $(a_n)_{n \in \mathbb{N}}$  is called <u>convergent to  $a \in \mathbb{R}$ </u> if  $\forall \epsilon > 0 \quad \exists N \in \mathbb{N} \quad \forall n \ge \mathbb{N} : |a_n - a| < \epsilon$   $\epsilon_{n \in [n \in [n \in [n]] + n \in [n]]}$   $a_1 = a_2$ If there is no such  $a \in \mathbb{R}$ , we call the sequence  $(a_n)_{n \in \mathbb{N}} divergent$ . Example:  $(a_n)_{n \in \mathbb{N}} = (\frac{1}{n})_{h \in \mathbb{N}}$  is convergent to  $O \in \mathbb{R}$ . Proof: Let  $\epsilon > 0$ . We choose  $\mathbb{N} \in \mathbb{N}$  such that  $\mathbb{N} \cdot \epsilon > 1$ . Then for  $n \ge \mathbb{N}$ , we have:  $|a_n - 0| = |a_n| = \frac{1}{n} \le \frac{1}{N} \le \epsilon$ .
